

Python Interview Questions for Freshers (15 Questions)

1. Tell me about yourself.

Answer:

My name is Bhagya Sree. I am pursuing B.Tech in Artificial Intelligence and Machine Learning. I have learned Python, SQL, and Machine Learning basics. Recently, I worked on a GenAI project using RAG and CrewAI. I am looking for an opportunity to apply my skills and learn from experienced professionals.

2. What is Python?

Answer:

Python is a high-level, interpreted, and object-oriented programming language. It is easy to learn and widely used in web development, automation, data science, AI, and machine learning.

3. Why do you want to learn Python?

Answer:

Python has simple syntax and a large number of libraries. It helps in developing applications quickly, especially in AI and data science.

4. What are Python's features?

Answer:

Python is easy to read, interpreted, platform-independent, object-oriented, open-source, and has a large standard library.

5. What is the difference between a list and a tuple?

Answer:

A list is mutable, so we can modify it. A tuple is immutable, so it cannot be changed after creation.

6. What are variables?

Answer:

A variable is used to store data in memory. In Python, we don't need to declare the data type explicitly.

7. What are Python data types?

Answer:

Common data types are int, float, string, list, tuple, dictionary, set, and boolean.

8. What is the difference between == and =?

Answer:

= is used to assign a value to a variable, while == is used to compare two values.

9. What is a function?

Answer:

A function is a reusable block of code that performs a specific task. It helps reduce code repetition.

10. What is a dictionary?

Answer:

A dictionary stores data as key-value pairs. Keys are unique, and values can be of any data type.

11. What are loops in Python?

Answer:

Python has two loops: for and while. They are used to execute a block of code repeatedly.

12. What is OOP?

Answer:

Object-Oriented Programming is a programming approach based on classes and objects. Its main concepts are encapsulation, inheritance, polymorphism, and abstraction.

13. What is the difference between break and continue?

Answer:

break exits the loop completely, while continue skips the current iteration and moves to the next one.

14. What are Python modules?

Answer:

A module is a Python file containing functions, classes, and variables that can be imported into another program.

15. Why should we hire you?

Answer:

I have a strong foundation in Python and AI concepts. I am a quick learner, hardworking, and eager to improve my skills. I am confident I can contribute to the team while learning from experienced professionals.
